

## VOLT STICKS

**BEWARE THAT THE VOLT STICK DOES NOT WORK IN ALL CIRCUMSTANCES.**

Many people rely on this equipment to their own detriment.

Volt sticks do not work on steel wire and lead armoured cable, MIMS (pyro) direct current.

Volt sticks may also not work on PVC conduits containing energised cables or orange circular cable.

Volt sticks are the same as any other test equipment – ensure they are operating properly (see Alert 9 Test and testing equipment).

Contact your designated Health & Safety representative, your local organiser or your Union OH&S officer.
